Advantage Acre® Highlights

Jeff Long, CCA, Technical Team Agronomist – LG Seeds

Advantage Acre® is a web-based farm management tool that will provide you with resources essential for a modern-day farm. An account with Advantage Acre Plus provides even more precision agriculture features to keep your farm one step ahead of the competition.

Advantage Acre gives you the ability to map fields and keep records by creating a field history. This field history tracks information such as planting dates, equipment used, herbicide used and any other notes you may want to add for your own reference. Additionally, you can utilize detailed soil information to create a seed plan for your farm. In-field validation called *test blocks* can be placed in each field to gain insight into the most profitable planting population for each unique environment. These test blocks are two-acre squares divided into four half-acre subsections. Each block plants at a different rate so you can learn the most high-yielding population for your field in that given year and adjust your management decisions for the next to keep improving.

Advantage Acre Plus includes all the features of a free Advantage Acre account, as well as data enhancements that allow the farmer to fine tune every input on a field-by-field basis. With Advantage Acre Plus you receive access to additional information from our proprietary productivity index, the WeatherTrends 360® 11-month weather report, functional soil maps, variable rate nitrogen and seeding prescriptions and more. All these features will help as you begin to make a field-by-field plan for your farm and deliver on that plan throughout the growing season.

Combining Advantage Acre with your knowledge of your farm and an LG Seeds STAR Partner's knowledge of our product lineup is a great way to ensure you are maximizing every acre.
